Course: Computer Science

Final Project Design System

Step A: The palette, as a ColorScheme

a. Color Token Table

Role	Hex	Used For
primary	#2563EB	Main buttons, App Bar accents
onPrimary	#FFFFFF	Text/icons on primary buttons
secondary	#10B981	Generic success indicators
statusPending	#004AC6	Pending status text/icons, "Violation Description" section label
statusPendingBg	#D9E3F6	Pending badge background
statusResolved	#006C49	Resolved status text/icons
background	#F8F9FF	Main screen background
surface	#FFFFFF	Cards, forms, dialogs, modal
surfaceTint	#DBE1FF	Stat-card backgrounds (e.g. "Total Reports")
onSurface	#1F2937	Body text, headings, labels
error	#DC2626	Validation errors, failed submissions, destructive actions
scrim	rgba(0,0,0,0.5)	Modal/dialog overlay (needs confirmation — no modal-open screenshot without content on top to sample from)

Step B: The type scale, as a TextTheme

Your Style	Flutter slot	Size	Weight	Used For
Heading	headlineSmall	28sp	Bold	Screen titles ("Welcome to AGOS," "Submit Report," "Report Details")
Body	bodyMedium	16sp	Regular	Descriptions, placeholder text, list body copy

Field Label	bodyMedium (weight override)	16sp	Medium	Field labels ("Username," "Description," "Location"), section headers ("Your Reports")
Caption	labelSmall	12sp	Regular	Timestamps, hints, helper text
Section Label	labelSmall (color override)	12sp	Bold, letter-spaced, statusPending blue (#004AC6)	Small caps section labels inside content blocks (e.g. "VIOLATION DESCRIPTION")

Step C: Spacing, as constants

```
class AppSpacing {
  static const double xs = 4;
  static const double sm = 8; // spacingTight — closely related elements
  static const double md = 16; // spacingStandard — between sections/components
  static const double lg = 24; // spacingScreen — screen edge padding
}
```

```
class AppRadius {
  static const double small = 8; // badges
  static const double medium = 12; // inputs, image containers
  static const double large = 16; // cards, modal
  static const double pill = 28; // buttons — needs confirmation, visually near-full pill
}
```

Step D: Components, as files

Component	Level	File	Constructor Parameter	Appears On
Primary Button	Atom	lib/widgets/primary_button.dart	String label, VoidCallback? onPressed, IconData? icon, bool isLoading	Login, Home Dashboard, Submit Report, Report Details
Text Input Field	Atom	lib/widgets/text_input_field.dart	String label, String? hint, TextEditingController controller, bool obscureText, String? Function(String?)? validator, IconData? leadingIcon, IconData? trailingIcon, bool multiline	Login, Submit Report
Status Badge	Atom	lib/widgets/status_badge.dart	String status, String label, bool onImage	Home Dashboard (Report Card), Report Details (photo overlay)

Detail Row	Atom	lib/widgets/detail_row.dart	IconData icon, String label, String value	Report Details
Report Card	Molecule	lib/widgets/report_card.dart	String reportTitle, String status, String date, String location, String? imageUrl, VoidCallback onTap	Home Dashboard,
Image Upload Component	Molecule	lib/widgets/image_upload.dart	String? image, VoidCallback onUpload, VoidCallback onRemove	Submit Report
Photo Evidence Viewer	Molecule	lib/widgets/photo_evidence_viewer.dart	List<String> images, String? mapThumbnailUrl, String status	Report Details
Stat Summary Card	Molecule	lib/widgets/stat_summary_card.dart	String label, int count, IconData icon, bool highlighted	Home Dashboard
Navigation Header	Organism	lib/widgets/navigation_header.dart	String title, bool showBackButton, VoidCallback? onBack, List<Widget>? actions, bool showBrandIcon	Home Dashboard, Submit Report, Report History, Report Details
Detail Modal	Organism	lib/widgets/detail_modal.dart	String title, VoidCallback onClose, Widget child, Widget? actionButton	Report Details

Step E: The theme file, assembled (bonus)

```
// lib/theme.dart
```

```
import 'package:flutter/material.dart';
```

```
const _primary = Color(0xFF2563EB);
```

```
const _secondary = Color(0xFF10B981);
```

```
const _statusPending = Color(0xFF004AC6);
```

```
const _statusPendingBg = Color(0xFFD9E3F6);
```

```
const _statusResolved = Color(0xFF006C49);
```

```
const _background = Color(0xFFF8F9FF);
```

```
const _surface = Color(0xFFFFFFFF);
```

```
const _surfaceTint = Color(0xFFDBE1FF);
```

```
const _onSurface = Color(0xFF1F2937);
```

```
const _error = Color(0xFFDC2626);
```

```
final appTheme = ThemeData(
  useMaterial3: true,
  colorScheme: const ColorScheme.light(
    primary: _primary,
    onPrimary: Colors.white,
    secondary: _secondary,
    background: _background,
    surface: _surface,
    onSurface: _onSurface,
    error: _error,
  ),
  textTheme: const TextTheme(
    headlineSmall: TextStyle(fontSize: 28, fontWeight: FontWeight.bold),
    bodyMedium: TextStyle(fontSize: 16),
    labelSmall: TextStyle(fontSize: 12, color: Colors.grey),
  ),
  cardTheme: CardThemeData(
    margin: const EdgeInsets.all(8),
    shape: RoundedRectangleBorder(
      borderRadius: BorderRadius.circular(AppRadius.large),
    ),
  ),
  filledButtonTheme: FilledButtonThemeData(
    style: FilledButton.styleFrom(
      minimumSize: const Size.fromHeight(48),
      shape: RoundedRectangleBorder(
        borderRadius: BorderRadius.circular(AppRadius.pill),
      ),
    ),
  ),
);
```

```
class AppSpacing {  
    static const double xs = 4;  
    static const double sm = 8;  
    static const double md = 16;  
    static const double lg = 24;  
}
```

```
class AppRadius {  
    static const double small = 8;  
    static const double medium = 12;  
    static const double large = 16;  
    static const double pill = 28;  
}
```

What changed, and why

Element	Prelim said	Now Says	Why it Changed
Palette	6 hand-picked colors, no status distinction	Kept the hand-picked full role table, added confirmed statusPending (#004AC6), statusPendingBg (#D9E3F6), statusResolved (#006C49), and surfaceTint (#DBE1FF); updated background to #F8F9FF	Building the actual Login/Dashboard/Details/Submit screens surfaced two dedicated status colors and a light card tint that plain success/error/background/surface didn't cover, and the real background hex was slightly off from the original spec
Radius	Not defined at all	Added AppRadius (small/medium/large/pill)	Every button, card, input, and the modal in the mockups is consistently rounded — the theme file needed a real value to reuse
Heading size	24sp	28sp	Confirmed directly from the Login screen
Field labels	No dedicated style	16sp Medium (weight override on bodyMedium, not a new size)	Confirmed directly from the Username field label
